1   Product Description

NSRT_mk4_Dev is a variant of the *NSRT_mk4* that is targeted at developers and OEMs. It includes a digital MEMS microphone and an open communication protocol based on Virtual Com Port. It can measure real-time exponentially-averaged levels "L", as well as integrated LEQs.

The *NSRT_mk4_Dev* includes the following features:

- Type I precision
- A, C and Z weighting curves.

- *Integrating* Sound-Level Meter, provides LEQ and instantaneous exponentially averaged level "L"

- Individual Manufacturer's Certificate of Calibration from Convergence Instrument provided with every instrument purchased.
- Digital very sensitive MEMS microphone (30 dBA typical noise floor)
- Completely sealed weatherproof enclosure designed for outdoors applications. Now includes an ePTFE membrane that seals the microphone against dust and water.
- All-digital design.
- Ultra-stable sensitivity (field recalibration is easily done, but seldom required)
- Very low sensitivity variation due to temperature changes
- Very low sensitivity to vibrations
- Adjustable response time.
- Can be used as a high-quality USB digital microphone (Optional USB-Audio interface)
- Can be field-calibrated.
- Observes and records 100% of the acoustic signal (no missed samples).
- Editable individual custom ID for easier instrument management.
- All settings are stored in non-volatile memory. So the instrument will regain full functionality after a power loss.

2   Applications

- Sound level and acoustic dose measurement and recording.
- Monitoring of safe working conditions.
- 24/7 noise monitoring on construction sites.
- Activity detection and logging.
- Long-term measurement and recording of acoustic levels for environmental impact studies.
- Specially designed for long-term outdoors applications.

3   Specifications

Category	Specification
Bandwidth	- 20 Hz to 20 kHz
Microphone Sensor	- Digital MEMS
Precision Class	- Type I
Saturation Level (typical @ 1 kHz)	- 120 dB-A - 120 dB-C - 120 dB-Z
Temperature Error	- Better than 0.6 dB (-20 degC < T < 60 degC
Sensitivity to Vibrations	- 60 dB$_{SPL}$/g (20 dB lower than typical measurement microphone)
Weighting Curve	- dB-A - dB-C - dB-Z
Noise-Floor (Typical)	- 30 dB-A - 46 dB-C - 52 dB-Z
Duty Rate of Signal Capture and processing	- 100% - No Missed Samples
Calibration	- Field-calibrated using a 94 dB 1/2" calibrator
Connectivity	- USB (Virtual Com Port interface with open communication protocol)
Temperature Range	- -20 degC to 60 degC (-4 degF to 140 degF)
Dimensions	- 19 mm x 42 mm x 160 mm - (0.75" x 1.65" x 6.25")
Weight	- 50 g
Construction	- Weather-proof enclosure
Microphone Dust Protection	- Expanded polytetrafluoroethylene (ePTFE) dust and water barrier
Protocol	- Open and Documented

Table 1

3.1 Frequency Response

Figure 1 shows the typical spectral error in dB-A, dB-C and dB-Z, at 32 kHz and 48 kHz sampling rate, together with the type I limit lines.

Figure 1

3.2 Directivity

Figure 2 shows the directivity of the instrument as a function of frequency.

Far field directivity (P(r,θ)/P(r,0)) in transverse plane

Figure 2

4   Platforms supported

- Windows

- MacOS

- Linux

The instrument has been tested on Windows and Linux. It will work on any platform that provides a generic CDC-class USB driver (Virtual Com Port).
